

## Summary

1. Second intertidal and subtidal monitoring of test sites
2. Web portal wireframes and site layout underway
3. Presented case study and portal design to Cromane co-op

## Case Study – Cromane

- Use of rope grown seed for BG on-growing
- Variable results, with good retention on one plot and total loss on another
- Subtidal sampling found no live seed and shell with evident damage by crabs

## Portal Development

- Industry engagement over portal contents and design
- Development of wireframes and site layout
- Processing of existing data for integration into the portal

## January Work Outline

1. Ongoing monitoring and genetics reporting
2. Advice and support of local rope culture initiatives
3. Further Welsh and Irish industry engagement during portal build
